Contact lenses are a great alternative to glasses, they offer many benefits and depending on your lifestyle they could be exactly what you need. People often have questions and concerns though, so with that in mind, here are some of the most common questions we are asked.

If you would like to discuss contact lens options further, please contact today and we will be happy to give you any advice you require.

Do contact lenses hurt to wear?

No, patients usually find lenses very comfortable to wear and get used to them very quickly. At Glyn Jones we stock many different types of contact lens and even if you have very sensitive eyes we can probably suggest a suitable option for you.

Can a contact lens get lost in your eye?

No, it is impossible for this to happen. If you do ever have a problem finding the lens in your eye, your optician will be able to find it and remove it easily.

Do contact lenses take a lot of time to look after?

No. Some types of lenses have to be cleaned after every use, but daily disposable lenses take no looking after as you just throw them away and use another pair the next day.

At what age can you start wearing contact lenses?

There is no lower or upper age limit. Lenses can be prescribed as soon as your optician is confident that the patient is capable of wearing and caring for them correctly. All Patients are different so to provide the best ophthalmic advice and duty of care we recommend you contact us so that we can discuss your needs in more detail.
